This text explores patterns, along with ever-evolving diversity. First, the text puts the smallest unit of life--the cell--under a microscope. Students learn about the parts of cells, their chemistry, and how they function and create energy. Next, the text introduces more complex biological systems. It studies cellular reproduction, inheritance patterns, and genetics. Lastly, they examine how biological systems act upon each other in communities and ecosystems. Overall, this high-interest, low-readability text makes it easy for you to engage students who struggle with reading, language, or a learning disability. Lexile Level 850 Reading Level 3-4 Interest Level 6-12

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do

much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Connect students in grades 4 and up with science using Learning about Cells. In this 48-page resource, students learn what cells are, the parts of cells, how cells live and reproduce, and how to use a microscope to view them. It establishes a dialogue with students to encourage their interest and participation in creative and straightforward activities. The book also includes a vocabulary list and a unit test. This book supports National Science Education

Appealing graphics boost students' interest and understanding of chemistry
Chemistry--looking at what matter is made of and how it behaves, down to the subatomic level--comes alive with this new text. With enticing, full-color graphics and page layouts that draw students in, Chemistry provides a clear, sound basis of scientific knowledge. Besides presenting chemistry fundamentals, the text offers bonus features that dispel common myths and provide examples of connections between chemistry and the environment, technology, and consumer choices. It also presents real-life problems affecting the world and their chemistry-related solutions. In addition, Investigations and Express Labs give students added exposure to chapter concepts for greater comprehension. A perfect introduction to the field of chemistry. Lexile Level 880 Reading Level 3-4 Interest Level 6-12

A comprehensive, standards-based world history program, this program covers the beginning of human society to contemporary times. With an easy-to-follow format, students are encouraged to read and gain more understanding about the world in which they live. World History provides engaging features such as a History in Your Life and

Then and Now, which make history relevant. Biographies, Spotlight Stories, Map Skills and Map Studies, and Document-Based Readings provide multiple perspectives from which to view and learn about history.

This textbook takes you on a journey to the basic concepts of cancer biology. It combines developmental, evolutionary and cell biology perspectives, to then wrap-up with an integrated clinical approach. The book starts with an introductory chapter, looking at cancer in a nut shell. The subsequent chapters are detailed and the idea of cancer as a mass of somatic cells undergoing a micro-evolutionary Darwinian process is explored. Further, the main Hanahan and Weinberg "Hallmarks of Cancer" are revisited. In most chapters, the fundamental experiments that led to key concepts, connecting basic biology and biomedicine are highlighted. In the book's closing section all of these concepts are integrated in clinical studies, where molecular diagnosis as well as the various classical and modern therapeutic strategies are addressed. The book is written in an easy-to-read language, like a one-on-one conversation between the writer and the reader, without compromising the scientific accuracy. Therefore, this book is suited not only for advanced undergraduates and master students but also for patients or curious lay people looking for a further understanding of this shattering disease
