A collection of thirteen stunning stories by one of the most celebrated American writers of the twentieth century A follow-up to his 1970 science fiction collection, The General Zapped an Angel, Fast’s book of thirteen new science fiction stories is brisk and engrossing. In “The Hoop,” a scientist builds a portal to an unknown destination, which the mayor of New York City hijacks to use as a garbage dump until the location’s surprising, and hilarious, revelation. And in “The Egg,” set three thousand years in the future, a research team discovers an egg, something they have never seen before, cryogenically frozen in a nuclear bunker. These thirteen stories are bizarre, hilarious, poignant, and sure to entertain. This ebook features an illustrated biography of Howard Fast including rare photos from the author’s estate.

Isobel, haunted by the memory of Varen, goes to Baltimore where she confronts the dark figure known as the Poe Toaster, succeeds in interrupting his ritual, and discovers a way to return to the dream-world, where she must face a new adversary.

In 1892, Alexander Berkman, Russian émigré, anarchist, and lover of Emma Goldman, attempted to assassinate industrialist Henry Clay Frick. The act was intended both as retribution for the massacre of workers in the Homestead strike and as an incitement to revolution. Captured and sentenced to serve a prison term of twenty-two years, Berkman struggled to make sense of the shadowy and brutalized world of the prison-one that hardly conformed to revolutionary expectation. This book is Beckman’s Diary from 1920 to 1922 including the text known as The Anti-Climax.

Thoroughly updated for its third edition with the latest research in the field, this innovative text delivers an apt and comprehensive introduction to the rich and complex world of animal behaviour and cognition. Discover pivotal case studies and experiments that have irrevocably shaped how we view the psychological and social lives of animals and discover such key cognitive topics as memory, communication and sensory perception. Projecting an insightful scope into the cognitive world of animals, from considering the use of tools in birds to the dance communication system of the honey bee, Wynne and Udell analyse and explain the importance of the observations and studies that have led to the greater understanding of how animals learn, perceive social relations, form concepts, experience time and navigate space. Written by two leading researchers in the field, including the author of the best-selling popular science book Dog is Love, this textbook is a complete resource for students of animal cognition, animal behaviour or comparative psychology.

#1 bestselling author Simon Kernick will leave you breathless with his sheer storytelling power in this race-against-time thriller about a terrorist threat in London. An explosion blasts through a cafe in Central London. Minutes later, a call from an unknown terror group warns that a far greater attack will be launched in twelve hours’ time. William Garrett, nicknamed “Fox,” is awaiting trial for mass murder. He claims he can name the bombers—but only at a price. It’s a terrifying race against time for Detective Inspector Mike Bolt and Deputy Commissioner Tina Boyd as they chase their targets across the city in a desperate bid to prevent a major atrocity before it’s too late... As shocking revelations are unveiled, you’ll be racing to the last page as fast as the characters in Ultimatum. As #1 New York Times bestselling author Harlan Coben says, “Simon Kernick writes with his foot pressed hard on the pedal. Hang on tight!”

Introduction to Fluid Mechanics is a mathematically efficient introductory text for a basal course in mechanical engineering. More rigorous than existing texts in the field, it is also distinguished by the choice and order of subject matter, its careful derivation and explanation of the laws of fluid mechanics, and its attention to everyday examples of fluid flow and common engineering applications. Beginning with the simple and proceeding to the complex, the text introduces the principles of fluid mechanics in orderly steps. At each stage practical engineering problems are solved, principally in engineering systems such as dams, pumps, turbines, pipe flows, propellers, and jets, but with occasional illustrations from physiological and meteorological flows. The approach builds on the student’s experience with everyday fluid mechanics, showing how the scientific principles permit a quantitative understanding of what is happening and provide a basis for designing engineering systems that achieve the desired objectives. Introduction to Fluid Mechanics differs from most engineering texts in several respects: The derivations of the fluid principles (especially the conservation of energy) are complete and correct, but concisely given through use of the theorems of vector calculus. This saves considerable time and enables the student to visualize the significance of these principles. More attention than usual is given to unsteady flows and their importance in pipe flow and external flows. Finally, the examples and exercises illustrate real engineering situations, including physically realistic values of the problem variables. Many of these problems require calculation of numerical values, giving the student experience in judging the correctness of his or her numerical skills.

Learn to assess and treat respiratory care disorders! Now in full color, Clinical Manifestations and Assessment of Respiratory Disease, 6th Edition bridges normal physiology and pathophysiology to provide a solid foundation in recognizing and assessing conditions. Authors Terry Des Jardins and George G. Burton describe how to systematically gather clinical data, formulate an assessment, make an objective evaluation, identify the desired outcome, and design a safe and effective treatment plan, while documenting each step along the way. Unique coverage of Therapist-Driven Protocols (TDPs) prepares you to implement industry-approved standards of care. Unique! Clinical scenarios connect to specific diseases so you can better understand the disease and the treatment modalities used. Unique! A focus on assessment and Therapist-Driven Protocols (TDPs) emphasizes industry-approved standards of care, providing you with the knowledge and skills to implement these protocols into patient care. Case studies help in applying information to assessment and treatment. Overview boxes summarize the clinical manifestations caused by the pathophysiologic mechanisms of each disorder. End-of-chapter questions include multiple-choice, short answer, matching, and case studies to test knowledge and understanding, pointing out areas that might require further study. A glossary of key terms with definitions is included in the back of the book. Appendices offer easy access to information such as calculations, symbols, medications, and measurements, plus answers to selected case studies. A unique full-color design enhances content and shows realistic examples of diseases and conditions. Student-friendly features reinforce learning with chapter outlines, objectives, and key terms. A consistent presentation of disease information shows background, treatment, and assessment for each condition so you learn the material in a clear, cohesive manner. Over 15 additional case studies with answers are added to the companion Evolve website.
