Spark 2.X, there were different entry points for different Spark jobs; that is, for Spark SQL we had `sqlContext` and if Hive features were also required then `HiveContext` was the entry point. With Spark 2.X this ambiguity has been removed and now we have one single entry

point called
SparkSession.
However, it is to be
noted that all the
module-specific entry
points are still very
much around and
have not been
deprecated yet.
