The geometrical study of a surface  $M$  in Euclidean space  $\mathbb{R}^3$  separates into three distinct categories: the intrinsic geometry of  $M$ , the shape of  $M$  in  $\mathbb{R}^3$ , and the Euclidean geometry of  $\mathbb{R}^3$ . Geometry of  $\mathbb{R}^3$  is based on the dot product and consists of those concepts preserved by the

isometries of  $\mathbb{R}^3$ . The chapter emphasizes that the geometry of  $M$  is also based on the dot product—applied only to vectors tangent to  $M$ —and that it consists of those features preserved by the isometries of  $M$ .
