10 Best Clinics for Critical Care in India [2020 Prices]

Critical care practices in India have evolved significantly over the past decade. Critical care initially began as a service in major hospitals, but with the formation of the Indian Society of Critical Care Medicine the development of this speciality has been very rapid. Regular conferences, updates, continuing medical education programmes and workshops have emerged, and postdoctoral training programmes have been developed.

The increase in patient demand for critical care services, caused by the aging population and advances in medicine that extend life expectancy has put a tremendous strain on critical care¹. Delivering high quality critical care to your patients with limited staff and financial resources demands new approaches and thinking in today's complex healthcare environment.

Manual of ICU Procedures is a comprehensive, step-by-step guide to intensive care procedures. The book is divided into five sections, including airway and respiratory; vascular and cardiac; neurological; gastrointestinal, abdominal, and genitourinary procedures. Enhanced by 428 colour images and illustrations, Manual of ICU Procedures is an ideal resource for all critical care professionals.

Millions of children are dying each year with preventable and reversible critical illness, including circulatory shock and respiratory failure. According to the World Health Organization, in 2015, the under-five mortality rate in low-income countries was 76 deaths per 1000 live births – about 11 times the average rate in high-income countries (7 deaths per 1000 live births). There is limited data about the nature of the delivery of critical care in resource-limited regions. The care of critically ill children in low-resource settings is challenging, contributing factors include limitations in the existing infrastructure, lack of resources, and low numbers of appropriately trained healthcare workers. Meeting these challenges requires clinical evidence pertinent to the local settings, adequate number of well-trained personnel, quality improvement activities, and the ongoing development of preventative measures. In addition, approaches to prevent worsening critical illness in at-risk hospitalized patients are needed. We are presenting 15 state-of-the art manuscripts from international experts, from all settings, involved in the care of critically ill children in resource-limited settings. This collection of manuscripts covers topics including education, research, clinical experience and infectious diseases. We hope that we are providing a window into the future of critical care delivery for all children around the world.

Where To Download Critical Care In India

In consultation with Consulting Editor, Dr. Cynthia Bautista, Guest Editor Christi Delemos has created an issue of Critical Care Nursing Clinics that gives the readers an opportunity to discover critical care nursing practices from critical care nurses around the world. Authors will have the opportunity to share the contributions of critical care nurses to health care globally. Current challenges in managing critical care patients anywhere in the world are discussed; articles are specifically devoted to ICU Nursing Priorities in the United States; Caring for Traumatic Brain Injury Patients: Australian Nursing Perspectives; Use of Diaries in ICU Delirium Patients: German Nursing Perspectives; Caring for Patients with Aneurysmal Subarachnoid Hemorrhage: Nursing Perspectives from the UK; Critical Care Nursing in India; Nursing Priorities in Critical Care Nursing in the Philippines; The Glasgow Coma Scale: A European and Global Perspective on Enhancing Practice; and Care of the Patient with Acquired Brain Injury in Latin America and the Caribbean. Readers will come away with new perspectives of care for the critical care patient.

This atlas is a comprehensive guide to critical care for intensivists. Divided into eight sections, the book begins with discussion on airway management. The following sections describe critical care for different sub specialties – respiratory system, cardiology, gastroenterology and neurology. The final sections cover trauma cases, microbiology and miscellaneous topics which provide an overview of rheumatology, nephrology, haematology, ultrasound and more. The book is highly illustrated with more than 1100 clinical photographs, diagrams, radiological images and tables. Key points Comprehensive guide to critical care for intensivists Covers key sub specialties Includes trauma cases Highly illustrated with more than 1100 photographs, diagrams and radiological images

Perioperative care is the care that is given before and after surgery. This textbook is a complete guide to the anaesthetic and critical care management of patients undergoing complex surgeries in all organ systems of the body. Topics cover all age groups – neonates, children, and adults. Divided into 11 sections, the book begins with a general overview of critical care in the perioperative period discussing airway management, pain, fluid and electrolyte therapy, shock, arterial blood gas analysis, respiratory failure and mechanical ventilation, and thromboembolism. The following sections cover surgeries in different organ systems and patient groups – cardiothoracic and vascular, neurosciences, paediatrics, obstetrics and gynaecology, gastrointestinal, genitourinary, orthopaedics, head and neck, and transplantation. The final section explains selected miscellaneous topics including nutrition, haemodynamic monitoring, echocardiography, renal replacement therapy, and antibiotics. Compiling 700 pages, the comprehensive text is further enhanced by clinical photographs, diagrams and tables. Key points Comprehensive guide to perioperative critical care in neonates, children and adults Covers complex surgeries in all organ systems Includes discussion on imaging, airway management, and ventilation Highly illustrated with clinical photographs, diagrams and tables

This manual is aimed at all healthcare practitioners, from novice to expert, who care for the critically ill patient, recognising that different disciplines contribute to the provision of effective care and that essential knowledge and skills are shared by all practitioners. It provides evidence-based guidelines on core critical care procedures and includes a comprehensive competency framework and specific competencies to enable practitioners to assess their abilities and expertise. Each chapter provides a comprehensive overview, beginning with basic principles and progressing to more complex ideas, to support practitioners to develop their knowledge, skills and competencies in critical care.

Critical care helps people with life-threatening injuries and illnesses. It might treat problems such as complications from surgery, accidents, infections, and severe breathing problems, and involves close, constant attention by a team of specially-trained health care providers. Critical care usually takes place in an intensive care unit (ICU) or trauma centre (MedlinePlus). This third edition has been fully revised to present the latest advances in the provision of critical care. Beginning with an introduction to intensive care, resuscitation, monitoring procedures and imaging, the following sections discuss critical care for different conditions including cardiovascular problems, fever and acute infections, respiratory disorders, critical care after open heart surgery, and in pregnancy. Other chapters cover fluid and electrolyte disturbances during critical care, nutritional support, and care of critically ill children, and a brand new chapter on end of life care has been added to this edition. Key points New edition presenting latest advances in provision of critical care Fully revised chapters cover critical care for numerous different disorders Includes brand new chapter on end of life care Previous edition published in 2005
