An Internists Illustrated Guide To Gastrointestinal ...

Gastroenteritis is a very common condition that causes diarrhoea and vomiting. It's usually caused by a bacterial or viral tummy bug. It affects people of all ages, but is particularly common in young children. Most cases in children are caused by a virus called rotavirus. Cases in adults are usually caused by norovirus (the "winter vomiting bug") or bacterial food poisoning.

Gastroenteritis | NHS inform

The Guidelines for the investigation of gastrointestinal illness (1998), reviewed and amended in 2010, has now been updated and re-drafted to include best practice infection control recommendations and further detailed information for the investigation of sporadic cases of gastroenteritis and food or water borne outbreak investigations.

Guidelines for the investigation of gastrointestinal illness

gnawing or burning stomach pain; feeling and being sick; feeling full after eating; If the stomach lining has been worn away (erosive gastritis) and exposed to stomach acid, symptoms may include pain, bleeding or a stomach ulcer. The symptoms of gastritis may come on suddenly and severely (acute gastritis) or last a long time (chronic gastritis).

Bloat (also called gastric dilation and volvulus, or GDV) is a life-threatening emergency. It is caused by the twisting of the stomach along its axis and the accumulation of gas with or without fluid in the stomach. Bloat tends to primarily affect large, deep-chested dogs. Stress may trigger an acute episode of bloat.
