~~Science Company~~

This example is prepared with "enough water" to make 750 mL of solution.

Convert 750 mL to liters. Liters of solution = mL of solution x (1 L/1000 mL)

Liters of solution = 750 mL x (1 L/1000

mL) Liters of solution = 0.75 L. This is enough to calculate the molarity. Molarity

Download Free How To Prepare Molar Solutions

= moles solute/Liter solution.

~~Learn How to Calculate Molarity of a Solution~~

Dilute the powder in the appropriate liquid volume. Most solutions will be diluted using water unless otherwise specified.

The volume of the liquid to be used is the

Download Free How To Prepare Molar Solutions

same that you used to calculate the mass of the compound. Mix the compound and the water together until the powder is fully dissolved.
