Locomotor skills are skills relating to bodily movements that generate an overall movement of the body through space. Waving one's arms through the air is not an example of a locomotor skill — though motor skill is involved, no overall bodily movement is generated. Walking and jumping forward, on the other hand, are considered to be locomotor skills, as the body is moved through space ...

Locomotor skills are the basic ways to move, the building blocks of coordination. Help your child practice these important skills: walking, galloping, jumping, hopping, side-sliding, leaping and skipping. Start gradually with walking (the easiest) and steadily advance to skipping (the most difficult). This is a perfect transition activity, during a play date when things aren't going well ...

MIXA / Getty Images Locomotor skills are an important group of gross motor skills that kids begin to learn as babies. Walking—one of the biggest physical development milestones of all for young children—is the first locomotor skill. In walking and the other locomotor skills that follow it, the feet move the body from one place to another.
