This book starts with the basic concepts of fuzzy sets and progresses through a normative view on possibility distributions and OWA operators in multiple criteria decisions. Five applications (that all build on experience from solving complex real world problems) of possibility distributions to strategic decisions about closing/not closing a production plant using fuzzy real options, portfolio selection with imprecise future data, predictive probabilities and possibilities for risk assessment in grid computing, fuzzy ontologies for process industry, and design (and implementation) of mobile value services are presented and carefully discussed. It can be useful for researchers and students working in soft computing, real options, fuzzy decision making, grid computing, knowledge mobilization and mobile value services.

S60 is the world leading smartphone platform. It has gained this position due to the huge developer base innovating on top of the S60 platform, the Product Creation Community who can provide expertise in different device program phases and tasks and the user-friendly interface that the platform provides. S60 Smartphone Quality Assurance introduces each of these themes. Quality is a diverse concept and it can mean different things in different products. Developing a high quality S60 device is extremely rewarding, although it has some challenges. This book tries to guide device manufacturers by providing knowledge on why these challenges exist and how the device program can tackle them. Readers will be provided with a comprehensive understanding on what it takes for companies to implement an S60 based device in a manageable and meaningful way. Key Features: Explanation of the competitive advantages of the S60 Detailed instructions on how to keep the binary compatibility in devices and applications Wide discussion of Quality Assurance and the best tools to use for success Complete quality assurance test procedures, and best practice The first book to market on S60 smartphone creation and QA is an indispensable resource for hardware and software designers, engineers, developers and manufacturers, as well as operators and service providers creating Series 60 and smartphone-specific services. Students of mobile phones will also find this a useful text.

Based on the authors' experiences in developing and teaching Symbian OS, this practical guide is perfect for programmers and provides a series of example-based scenarios that show how to develop Symbian applications. Exercises walk the reader through the initial development of a console-based card game engine to a graphical user interface(GUI)-based, two player blackjack game operating over a Bluetooth connection between two mobile phones Addresses how Symbian offers a number of different variants to allow for different user interfaces and screen savers - the most prevalent of these is S60 Discusses how the move toward 3G technology has resulted in an increasing need for mobile application development for S60 devices.

Inhaltsangabe:Abstract: Internet. Broadband access. Mobile telephony. Fixed telephony. TV. Google. Yahoo!. Social networks. Mobile network operators. Telecommunication operators. Media conglomerates. Citizen media. All these terms have always been traditionally considered independent, but nowadays the interrelations among all of them happen more often and are becoming deeper: a new global scenario is being defined, in which communications, entertainment and information are converging, being provided by global conglomerates in our PCs, TVs and mobile devices. Nowadays technology advances will soon enable to provide users with the best internet experience on the go. Services hosts, access providers, vendors, media owners and online players now realize that the barriers that traditionally have separated their markets dilute, bringing them all in a common-global market. Internet business models have now to converge with traditional structures and merges and acquisitions happen to reach competitive positions in foreign markets. The paradigm of internet will influence and change the most popular services as they are currently known. Fixed communication providers already suffer a loose of voice revenues in favor of the cheapest online communication. Mobile operators are facing now the same situations and find themselves on a delicate strategic situation: with VoIP nearing a competitive QoS, voice along doesn't seem to be for a long time enough as unique revenue source... Even watching TV will be soon an enriched personalized experience through the new IP end2end platforms. Will the online players be the ones successfully accomplishing a vertical expansion of their business? How will the mobile operators react? Which will be the paper of the network access providers? What about the media and content? How will all that affect the customers? In this document will be described the nowadays situation on the different markets involved in the converging scenario, and how the respective players situate themselves strategically. An initial global point of view will be followed by the definition of strategies and trends of each of them independently, and the determination of the merging points and relations among them. The effort will be focus firstly on offering recommendations and comparisons concerning specific environments. Step by step the basis of the competition environment in the converging market will be defined, offering a strategic map of the [...]

Implement state-of-the-art Mobile TV networks with this comprehensive guide to the latest technologies and standards, including MediaFLO, ATSC Mobile DTV, and CMMB, the same technologies seeing large-scale rollouts today around the world.
