This book examines five hundred years of South African economic history.

South African criminal law has undergone many changes since the introduction of the constitution. This text is a section-by-section commentary on the Criminal Procedure Act, which has frequent amendments.

If handbooks can be inspiring, this is it! Like a true companion, it takes in its stride conversations both big and small. Its entries do not just present an international and multidisciplinary mix, but true to life they work on several different scales. And, importantly, the book makes its authority evident. For it is like an extended website, but with all the added advantages of an encyclopaedia that actually tells you about the authors and the sources on which they have drawn. The resulting compilation is highly intelligent, thoughtful and above all usable. Dame Marilyn Strathern, University of Cambridge, UK The Elgar Companion to Development Studies is a major production in the development studies field, authored by a star-studded cast of contributors. With 136 entries covering a vast range of topics, it should quickly establish itself as a leading work of reference. We should all feel indebted to David Clark, who has successfully brought this substantial publishing project to completion. John Toye, University of Oxford, UK This is a most comprehensive handbook on development studies. It brings together a wide, varied array of carefully crafted summaries of 136 key topics in development by an international cast of well-respected academics and other experts in respective areas of study. The handbook is heavily interdisciplinary, organically combining economic, political, historical, social, cultural, institutional, ethical, and human aspects of development. While the wide range of entries might appear as a simple glossary listing or an encyclopedic collection, each of the 136 entries offers more depth and discussion than the average handbook. . . . Viewed in this light, this companion is highly likely to become known as a leading reference work on the topic. Highly recommended. Ismael Hossein-Zadeh, Choice The Elgar Companion to Development Studies is an innovative and unique reference book that includes original contributions covering development economics as well as development studies broadly defined. This major new Companion brings together an international panel of experts from varying backgrounds who discuss theoretical, ethical and practical issues relating to economic, social, cultural, institutional, political and human aspects of development in poor countries. It also includes a selection of intellectual biographies of leading development thinkers. While the Companion is organised along the lines of an encyclopaedia, each of its 136 entries provide more depth and discussion than the average reference book. Its entries are also extremely diverse: they draw on different social science disciplines, incorporate various mixes of theoretical and applied work, embrace a variety of methodologies and represent different views of the world. The Elgar Companion to Development Studies will therefore appeal to students, scholars, researchers, policymakers and practitioners in the field of development as well as the interested layman.

With nearly two hundred and fifty individually signed entries, the Encyclopedia of Twentieth-Century African History explores the ways in which the peoples of Africa and their politics, states, societies, economies, environments, cultures and arts were transformed during the course of that Janus-faced century. Overseen by a diverse and distinguished international team of consultant editors, the Encyclopedia provides a thorough examination of the global and local forces that shaped the changes that the continent underwent. Combining essential factual description with evaluation and analysis, the entries tease out patterns from across the continent as a whole, as well as within particular regions and countries: it is the first work of its kind to present such a comprehensive overview of twentieth-century African history. With full indexes and a thematic entry list, together with ample cross-referencing and suggestions for further reading, the Encyclopedia will be welcomed as an essential work of reference by both scholar and student of twentieth-century African history. Choice Outstanding Academic Title 2004

Comprehensive illustrated guide to plant science and ecology of southern African vegetation.

The alienating nature of the dominant curriculum in African schools and universities is an issue which simmered just below the surface in the 2015 student protests that swept through the South African higher education sector. The collection of essays found in this timely publication, offers compelling arguments for the deliberate embrace of the African culture to advance African knowledge and enhance African lives. It proposes fresh perspectives on what shape and form a decolonised curriculum should take on.

In Noether's original presentation of her celebrated theorem of 1918, allowances were made for the dependence of the coefficient functions of the differential operator which generated the infinitesimal transformation of the Action Integral upon the derivatives of the dependent variable(s), the so-called generalized, or dynamical, symmetries. A similar allowance is to be found in the variables of the boundary function, often termed a gauge function by those who have not read the original paper. This generality was lost after texts such as those of Courant and Hilbert or Lovelock and Rund confined attention to only point transformations. In recent decades, this diminution of the power of Noether's Theorem has been partly countered, in particular, in the review of Sarlet and Cantrijn. In this Special Issue, we emphasize the generality of Noether's Theorem in its original form and explore the applicability of even more general coefficient functions by allowing for nonlocal terms. We also look at the application of these more general symmetries to problems in which parameters or parametric functions have a more general dependence upon the independent variables.

Comprehensive and accessible, Tim Newburn 's bestselling Criminology provides an introduction to the fundamental themes, concepts, theories, methods and events that underpin the subject and form the basis for all undergraduate degree courses and modules in Criminology and Criminal Justice. This third edition includes: A new chapter on politics, reflecting the ever increasing coverage of political influence and decision making on criminology courses New and updated crime data and analysis of trends, plus new content on recent events such as the Volkswagen scandal, the latest developments on historic child abuse, as well as extended coverage throughout of the English riots A fully revised and updated companion website, including exam, review and multiple choice questions, a live Twitter feed from the author providing links to media and academic coverage of events related to the concepts covered in the book, together with links to a dedicated textbook Facebook page Fully updated to reflect recent developments in the field and extensively illustrated, this authoritative text, written by a leading criminologist and experienced lecturer, is essential reading for all students of Criminology and related fields.

AIMING FOR THE STARS is a memoir of Dr Sphumelele Ndlovu and his life of hardship, which led him to becoming a Scientist. His mother sold chickens to provide for her children, never considering himself worse off than others. The family was poor. Sphumelele ' s life was also derailed when strikes caused 24 out of the 28 teachers at his school to abandon their posts in his matric year. Education was Ndlovu ' s ticket to a better future, and he knew at a young age, that he wasn ' t going to give it up without a fight. Ndlovu ' s PhD placed him to be part of a team of scientists set out to measure the distance between the Earth and Moon using lasers. It is the sixth-ever such venture, but the first to be carried out by an African team. A man whose horizon was once confined to the perimeter of a chicken coop now handled tools that allowed his eyes to glide over galaxies.
