In petrol engines, the carburettor control both air and fuel supply to the engine cylinder under speed and load conditions. They vary the supply of air-fuel mixture to meet the given condition. But in the diesel engine, the governor is used to keep the engine speed within limits.

List of Car Engine Parts: Its Function (With Pictures)
It is the parts of an engine that ignites the air-fuel mixture in the engine cylinder. It produces the spark at right time by using electrical energy of battery. The basic working principle is that when we have high electrical potential at one end and zero or negative potential at other end.

What are the Main Parts of an Automobile Engine ...
An internal combustion engine is an engine that uses the explosive combustion of fuel to push a piston within a cylinder - the piston's movement turns a crankshaft that then turns the car wheels via a drive chain or drive shaft. Different types of fuels commonly used for car combustion engines are gasoline (or petrol), diesel and CNG.

For a four-stroke engine, key parts of the engine include the crankshaft (purple), connecting rod (orange), one or more camshafts (red and blue), and valves. For a two-stroke engine, there may simply be an exhaust outlet and fuel inlet instead of a valve system.

Component parts of internal combustion engines - Wikipedia
Petrol engine or gasoline engine is an internal combustion engine with spark-ignition, designed to run on petrol and similar volatile fuels. In most petrol engines, the fuel and air are usually pre-mixed before compression. The pre-mixing was formerly done in a carburetor, but now it is done by electronically controlled fuel injection, except in small engines where the cost/complication of electronics does not justify the added engine efficiency. The process differs from a diesel engine in the m

Petrol engine - Wikipedia
The purpose of a gasoline car engine is to convert gasoline into motion so that your car can move. Currently the easiest way to create motion from gasoline is to burn the gasoline inside an engine. Therefore, a car engine is an internal combustion engine **i** combustion takes place internally. Two things to note:
