Best-selling author Graham Robb finds that the 2,000-year-old map of Ptolemy unlocks a central mystery of British history. Two years ago, Graham Robb moved to a lonely house on the very edge of England, near the banks of a river that once marked the southern boundary of the legendary Debatable Land. The oldest detectable territorial division in Great Britain, the Debatable Land served as a buffer between Scotland and England. It was once the bloodiest region in the country, fought over by Henry VIII, Elizabeth I, and James V. After most of its population was slaughtered or deported, it became the last part of Great Britain to be brought under the control of the state. Today, it has vanished from the map and its boundaries are matters of myth and generational memories. Under the spell of a powerful curiosity, Robb began a journey/on foot, by bicycle, and into the past/that would uncover lost towns and roads, and unlock more than one discovery of major historical significance. These personal and scholarly adventures reveal a tale that spans Roman, Medieval, and present-day Britain. Rich in detail and epic in scope, The Debatable Land takes us from a time when neither England nor Scotland existed to the present day, when contemporary nationalism and political turmoil threaten to unsettle the cross-border community once more. With his customary charm, wit, and literary grace, Graham Robb proves the Debatable Land to be a crucial, missing piece in the puzzle of British history.

Whilst documents and other written material are obvious resources that help shape our view of the past, maps too can say much about a nation's history. This is the first book to take maps seriously as a form of history, from the earliest representations of Scotland by Ptolemy in the second century AD to the most recent form of Scotland's mapping and geographical representation in GIS, satellite imagery and SATNAV.Compiled by three experts who have spent their lives working with maps, Scotland: Mapping the Nation offers a fascinating and thought-provoking perspective on Scottish history which is beautifully illustrated with complete facsimiles and details of hundreds of the most significant manuscript and printed maps from the National Library of Scotland and other institutions, including those by Timothy Pont, Joan Blaeu and William Roy, amongst many others.

Charles Withers explains how the choice of Greenwich to mark 0° longitude solved problems of global measurement that had engaged geographers, astronomers, and mariners since ancient times. This history is a testament to the power of maps, the challenges of global measurement, and the role of scientific authority in creating the modern world.

[A compelling read] that reveals how maps became informational tools charting everything from epidemics to slavery (Journal of American History). In the nineteenth century, Americans began to use maps in radically new ways. For the first time, medical men mapped diseases to understand and prevent epidemics, natural scientists mapped climate and rainfall to uncover weather patterns, educators mapped the past to foster national loyalty among students, and Northerners mapped slavery to assess the power of the South. After the Civil War, federal agencies embraced statistical and thematic mapping in order to profile the ethnic, racial, economic, moral, and physical attributes of a reunified nation. By the end of the century, Congress had authorized a national archive of maps, an explicit recognition that old maps were not relics to be discarded but unique records of the nation's past. All of these experiments involved the realization that maps were not just illustrations of data, but visual tools that were uniquely equipped to convey complex ideas and information. In Mapping the Nation, Susan Schulten charts how maps of epidemic disease, slavery, census statistics, the environment, and the past demonstrated the analytical potential of cartography, and in the process transformed the very meaning of a map. Today, statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically. Whether for urban planning, public health, marketing, or political strategy, maps have become everyday tools of social organization, governance, and economics. The world we inhabit/saturated with maps and graphic information/grew out of this sea change in spatial thought and representation in the nineteenth century, when Americans learned to see themselves and their nation in new dimensions.
