Finding out that a nodule in your lungs has spiculations is downright terrifying if you then learn that this is strongly suggestive of cancer. "While up to two-thirds of benign nodules can have spiculations (lung masses that have linear strands extending into the lung but not the pleura), spiculations are seen in at least 90% of cancers," says Alex Little, MD, a thoracic surgeon with a special interest in esophageal and lung cancer, and clinical professor at the University of Arizona.

The 193 nodules investigated comprised 113 pri- mary lung cancers, 15 metastatic cancers, 55 in- flammatory nodules and 10 benign tumors (Table 1). One patient with a double-cancer and another with a triple-cancer were included. Both had a synchronous, similar histology of adenocarcinoma. The other cases of multiple nodules were 2 double

New Classification of Small Pulmonary Nodules by Margin ...
A, The nodule is anatomically well defined. B, First, the maximal long-axis diameter is measured (16 mm, vertical arrow). Then, perpendicular to the long-axis measurement, the maximum short-axis diameter is measured (14 mm, horizontal arrow). The average diameter of the nodule is 15 mm.

Recommendations for Measuring Pulmonary Nodules at CT: A ...
Lung nodules are abnormal areas of shadow on the lungs identified on a chest X-ray or CT scan. Doctors cannot always tell if the nodule is lung cancer based on these types of imaging alone. Depending on the size of the nodule and your risk factors, further analysis may be needed including a biopsy of the nodule.
