This book's innovative format makes construction tailgate meetings or toolbox talks more effective while helping to achieve compliance with federal regulations. For each of its 27 separate topic areas, the guide provides a walk-around checklist (that identifies site-specific hazards, applicable federal regulations, and good practice guidelines to help the trainer prepare for a talk) and a training guide (to step the trainer through a meeting or talk).

Addressing everything from the history of the federal agencies that enforce the regulations to the requirements of the regulations themselves, this new book provides facility managers with a comprehensive instruction manual for understanding and complying with the major Occupational Safety and Health Administration (OSHA), Environmental Protection Agency (EPA), and Department of Transportation (DOT) regulations. Whether you manage a chemical facility, a warehouse, or an office building, you'll learn what your roles and responsibilities are and how to address your facility's environmental health and safety issues. In addition to discussing such legal requirements as recordkeeping, respiratory protection, hazardous waste management and training, hazard communication, and emergency response, author Brian Gallant provides practical recommendations for establishing and implementing safety and health procedures. He also provides nearly two dozen checklists, forms, and sample documents to help you establish and maintain a successful environmental health and safety program, including a safety meeting report template, a fire prevention audit checklist, a hazardous waste area weekly inspection checklist, and a Chemical Use in Facility Areas Self-Audit checklist.

The Study Guide is designed as a teaching aid to be used in conjunction with the book *Alive and Well at the End of the Day: The Supervisor's Guide to Managing Safety in Operations*, written by Paul D. Balmert. The book is designed to teach front-line supervisors of workers in a wide range of industries how to help and guide their employees to understand the risks involved in the various aspects of their work, and how to cope with those risks and to plan and execute their jobs in ways that can help eliminate accidents. Created by the highly experienced training specialists of Balmert Consulting, the Study Guide utilizes training best practices to help affix the principals of *Alive and Well at the End of the Day: The Supervisor's Guide to Managing Safety in Operations* in the minds of the reader. The use of strategically-crafted questions—both at the beginning and end of each review session—allows the reader to work with the material and become more familiar with it. The book was developed in response to multiple requests from readers of *Alive and Well at the End of the Day: The Supervisor's Guide to Managing Safety in Operations* who—enthusiastic about the messages and ideas in the book—wanted to find ways to make it become part of their operation's safety culture and practices. Occupational accidents have a massive personal and social cost as well as a major financial cost. The construction industry is one of the most dangerous industries, accounting for around 20–30% of all occupational deaths worldwide. The accompanying financial cost is either absorbed directly or passed on in the form of higher insurance costs. In addition, regulatory bodies have started to impose legal accountability on all the parties along the construction supply chain. OHS is hard to implement. Construction projects are complex, with a fluid workforce, and the regulatory framework is highly elaborate. OHS Electronic Management Systems for Construction presents a theoretical framework which is designed to overcome these difficulties, integrating OHS management in construction using knowledge management and web technologies. This framework is explained in a clear step-by-step way, as are features such as a systematically developed corporate safety memory, and a virtual learning portal to facilitate on-demand safety training. The ultimate aim of this book is to aid the development of an established safety culture at the organisational level, and the formation of an industry-wide community of safety practice. This is essential reading for OHS professionals and construction managers attempting to change their industry for the better, as well as advanced students and researchers.
